

Bloxd.io & BloxdHub

The Complete Encyclopedia

Bloxd.io is a free, browser-based multiplayer voxel sandbox that has quietly become the 4th largest browser game in the world by concurrent users. Launched in January 2021, it now pulls 4.21 million monthly visits, sustains ~19,000 players online at any given moment, and has shipped 185+ feature updates in under two years of logging. BloxdHub.com is the independent community hub that orbits it — 19,000+ registered users sharing mods, schematics, texture packs, and the only comprehensive API documentation that exists. This report covers everything: the game, its modes, its team, its code API, its community platform, and the full timeline of how it got here.

4.21M	~19K	185+	19,216
Monthly Visits Apr 2026, Semrush	Concurrent Players Live CCU, WebGameDB	Feature Updates Since Aug 2024	BloxdHub Users Total registered

I. What Is Bloxd.io

1. The Game FREE-TO-PLAY

A multiplayer voxel sandbox running entirely in the browser, inspired by Minecraft but different in almost every mechanical detail. Players explore, build, fight, and code — across 17+ distinct game modes. No download required. The game runs on browsers (desktop and mobile), with native Android and iOS apps launched in mid-2025.

- Genre: Sandbox / Multiplayer / .io game
- Platform: Browser (primary), Android (May 2025), iOS (July 2025)
- Release: January 2021
- Engine: Custom JavaScript (QuickJS for scripting)
- Global rank: #12,217 worldwide, #7,586 in the US (Semrush, Apr 2026)
- Top countries by traffic: US (31.9%), Canada (7.1%), Japan (6.9%), India (5.3%), Turkey (3.6%)
- Average session: 21 minutes, 10.5 pages/visit, 35.6% bounce rate

- 82.5% direct traffic; 13% from Google search

2. How It Differs from Minecraft

Bloxd is **lightweight by design**. Running in a browser forces architectural trade-offs that have become distinguishing features.

- No day-night cycle, no hunger bar, only one dimension
- 100 HP health system instead of hearts
- Water and lava do not flow
- TNT equivalent (Moonstone Explosives) requires rare ore to craft — anti-griefing by design
- Ender Pearl equivalent (Moonstone Orb) costs 15 HP to throw regardless of armor
- Enchanting is randomized like a loot box, not a controlled table
- Protectors (anti-grief blocks) instead of claims or region plugins
- JavaScript Code Blocks replace Redstone and Command Blocks
- 18 types of guns and 3 RPGs — firearms have no Minecraft equivalent
- Vertical slabs exist (a feature Minecraft players have begged for)

II. All Game Modes

1. Open-World Modes

The core sandbox experience.

- **Survival** — Full Minecraft-style survival with crafting, mining, building, mobs, PvP
- **Peaceful** — Survival with infinite health and no hostile mobs
- **Creative** — Infinite inventory, flight, unlimited building
- **The Bloxd SMP** — Official survival multiplayer with currency and trading
- **Plots** — Creative with 128×128 player-owned plots
- **Greenville** — Peaceful town sim — work, earn money, buy houses
- **One Block** — Skyblock-style: mine one block that regenerates through phases

2. Competitive PvP

- **Bedwars** — Solos, Duos, Trios, Squads, and Ranked 4v4. Destroy enemy beds, eliminate players
- **Skywars** — Floating islands, loot chests, last player standing. Kits, perks, and variations (OP, Golem Gauntlet, Explosives Frenzy)
- **Cube Warfare** — Fast-paced FPS, free-for-all or teams, multiple maps and mutations
- **Clutch** — Tactical 3v3 FPS, economy-based gun upgrades, first to 5 rounds

- **1v1 Fights** — Four ranked one-on-one combat games
- **DimensionZ** — High-stakes looting PvP across 3 difficulty dimensions. Permadeath on disconnect
- **Ranked PvP** — Added January 2026

3. PvE & Social Modes

- **99 Nights** — 5-player co-op horror survival (inspired by Roblox). Survive nights, rescue kids, fight bosses. Includes radar, traveling trader, random terrain gen
- **Last Stand** — Wave-based PvE in a closed arena. 6 kits, 3 maps (Castle, Garden, Roads)
- **Core Defenders** — Tower defense-style PvE (added May 2026)
- **Tsunami Steal Brainrots** — Dodge tsunami waves, collect brainrots, build passive income
- **Dress Up** — Fashion contest using all cosmetics for free
- **Fishing** — Catch fish, sell for money, upgrade rods. Fire & Ice expansion (Mar 2026)
- **Sky Islands** — New mode with Blitz, PvE, guns, and diamond bounties (Apr–May 2026)

4. Custom Games

TENS OF THOUSANDS

Player-made games are a first-class feature. Anyone can publish a custom game using Code Blocks and World Code. The "Publish Your Own Games" update dropped May 1, 2025. Notable community games include Farming Simulator and Build a Factory. The GitHub org (github.com/Bloxdy) open-sourced GrannyCode and other developed custom games.

III. Original Content & Mechanics

1. Mobs & Pets

Bloxd has its own bestiary. All passive and neutral mobs can be tamed via the Pet Friendship system (Nov 2025). Pets have hunger bars, friendship XP, levels (0–4), and unlock unique perks and special food recipes at each tier.

- **Hostile:** Draugr Knight (fast, 4-block jump, Diamond Sword), Draugr Zombie, Draugr Skeleton, Draugr Reaver (dodge-capable), Draugr Warper (teleports you to it), Frost Wraith, Cave Golem (drops Moonstone), Magma Golem (throws fireballs)
- **Tameable spirits:** Spirit Bear, Spirit Wolf, Spirit Golem, Spirit Stag, Spirit Gorilla — tamed with Moonstone, healed with Gold/Diamonds
- **Wildlife:** Deer, Stag, Bear, Wolf, Gorilla, Wildcat, Pig, Cow, Sheep, Horse
- Mob Spawner Blocks (Apr 2025), Mob Catchers (Aug 2025), Pet Renaming (Aug 2025)

2. Weapons & Equipment

- **Melee:** Swords, Knight Sword, Daggers, Whips, Clubs, Boomerangs
- **Ranged:** 18 gun types, 3 RPGs, Bouncy Bombs, Remote Moonstone Explosives, Fireballs, Iceballs, Firecracker Pebbles
- **Armor:** Standard tiers + Spiked Boots (snow speed + stomp damage), Fur Chestplate (reduced knockback), Gauntlets (5th armor slot)
- **Special tools:** Moonstone Pickaxe (Silk Touch), Golem Pickaxe (bonus fragments), Moonstone Axe (chops 7 wood blocks at once)
- **Enchanting:** Aura XP system, 5 table tiers (wood through diamond), random loot-box-style enchants

3. Blocks & Biomes

- **Original blocks:** Jump Pads, Fat Mushrooms (bouncy), Neon (luminous), Chalk, 16-color torches & wood, Vertical Slabs, Banners, Cave Blocks
- **Biomes:** Frozen Badlands (hostile ruins, rare loot), Spectral Forests (frost-themed), Jungle (Jul 2025), Pine Forest variants, Desert, Meadows, Great Maples, Cherry Blossom Forests
- **Structures:** Mysterious Ruins (with legendary chests), Underground Ruins (dungeons, arenas, magma chambers), Lootable Ruins
- **Utility:** Workbench (survival crafts), Artisan Bench (decorative), Iron Chest (passcode-locked), Salvaging Table (recycling), Protectors (anti-grief)

IV. The Development Team

1. Core Developers

14 KNOWN

Bloxd is made by a distributed team operating under Bloxd Ltd.

NAME	ROLE / FOCUS
Weiying	Original creator (ex-developer)
Arthur Baker	Current owner
Oliver	Active dev, skin customization
DirtyFleaSack	Active dev; Moonstone Axe, 99 Nights, pets, animal updates
Tom	Active dev; Code Boards, client-based World Code, World Code API
Slushie	Active dev; code editor improvements (Apr 2026), pet tweaks
Harry	Active dev; map design (Bedwars, Skywars, Pirates), Iron Chests
Jasninus	Active dev; Skywars variations, Natural Disaster
Pegasys	Active dev; Lucky Blocks Battlegrounds
WhoisEllie	Active dev
Stan	Active dev
Pixelbaker	Active dev
Mattzap	Ex-developer
Stardue	Ex-developer

V. The Code System & API

1. How Scripting Works

Bloxd replaced Redstone with JavaScript. Scripts run in a sandboxed QuickJS environment — no `window`, `setTimeout`, or browser APIs. All game interaction goes through the global `api` object.

METHOD	TRIGGER	CALLBACKS?	LIMIT
World Code (F8)	Event-driven callbacks	Yes (64 types)	16,000 chars
Code Blocks	Player click / adjacent board	No	16,000 chars each
Code Boards	Right-click ("press to code")	No	~96 chars

Code Blocks were added Feb 24, 2025. Before that, players had to cram code into 96-character boards with zero documentation. The API has since grown to 64 callbacks and 60+ functions.

2. Event Callbacks

64 callbacks cover every game event. Key ones:

- `tick(ms)` — Fires 20×/sec. The game loop. Keep it light.
- `onPlayerJoin(playerId)` / `onPlayerLeave(playerId)` — Player lifecycle
- `playerCommand(playerId, cmdText)` — Slash commands. Return `true` to suppress "Unknown command"
- `onPlayerChat(playerId, message)` — Return `false` to block messages (chat filters)
- `onPlayerChangeBlock(...)` — Return `"preventChange"` to cancel block edits (protection)
- `onBlockStand(playerId, x,y,z, blockName)` — Fires 20–80×/sec while standing. Pressure plates, lava damage
- `onPlayerKilledOtherPlayer`, `onMobKilledPlayer`, `onPlayerDamagingMob` — Full combat event chain
- `onPlayerFinishQTE`, `onPlayerBoughtShopItem`, `doPeriodicSave` — Advanced game management

3. Core API Functions

The `api.*` namespace spans 9 categories.

CATEGORY	KEY FUNCTIONS	SYNC/ASYNC
Player Identity	<code>getPlayerIds()</code> , <code>getPlayerId(name)</code> , <code>getEntityName()</code> , <code>playerIsLoggedIn()</code>	Sync
Position & Movement	<code>setPosition()</code> , <code>getPosition()</code> , <code>setVelocity()</code> , <code>applyGravity()</code> , <code>applyImpulse()</code>	Sync
Health & Combat	<code>setHealth()</code> , <code>getHealth()</code> , <code>applyHealthChange()</code> , <code>killLifeform()</code> , <code>applyEffect()</code>	Sync
Messaging	<code>sendMessage()</code> (private, styled), <code>broadcastMessage()</code> , <code>sendFlyingMiddleMessage()</code>	Sync
Inventory	<code>giveItem()</code> , <code>removeItemName()</code> , <code>hasItem()</code> , <code>getHeldItem()</code> , <code>clearInventory()</code>	Sync
Blocks & World	<code>setBlock()</code> , <code>getBlock()</code> , <code>setBlockRect()</code> , <code>setBlockWalls()</code> , <code>setCantChangeBlock()</code>	Sync
Mobs & NPCs	<code>attemptSpawnMob()</code> , <code>despawnMob()</code> , <code>getMobIds()</code> , <code>createMobHerd()</code>	Sync
Data Storage	<code>getPlayerDbValue()</code> , <code>setPlayerDbValue()</code> , <code>getLobbyDbValue()</code>	Async (Promise)
Visuals & UI	<code>playParticleEffect()</code> , <code>progressBarUpdate()</code> , <code>addQTE()</code> , <code>showShopTutorial()</code>	Sync

4. Advanced Features

- **Mesh Attachments:** `updateEntityNodeMeshAttachment()` lets you attach any block mesh to player body nodes — swords under feet, karts, capes, golem transformations
- **Client Options:** Per-player settings like `airJumpCount`, `maxHealth`, `music`
- **Entity Settings:** Control how players see each other (opacity, nametags)
- **Custom Crafting:** `editItemCraftingRecipes()` lets scripts define recipes per-player
- **Custom Shops:** `createShopItem()` with categories, images, buy buttons
- **QTEs:** Progress bar mini-games via `addQTE()`
- **Particle System:** Full control over emission, gravity, color gradients, velocity gradients, textures (bubble, glint, heart, soul, etc.)
- **Music:** 30+ built-in tracks settable per-player via `setClientOption("music", songName)`

5. Common Pitfalls

From your API Summary PDF and community docs:

- **Async race conditions:** `getPlayerDbValue()` returns a Promise. Always `await` or `.then()` before using data. Use `Promise.all()` in `onPlayerJoin`
- **Balance-as-string bug:** DB stores numbers as strings. Always `parseInt()` before arithmetic
- **Missing return values:** Forgetting `return true` in `playerCommand` prints "Unknown command". Forgetting `return false` in `onPlayerChat` fails to block messages
- **Tick performance:** Avoid `Object.keys(...).length` in tick. Use counters or throttle heavy loops
- **Chunk boundaries:** `setBlock()` on unloaded chunks throws errors. Guard with `isBlockInLoadedChunk()`
- **Duplicate islands:** Concurrent joins can increment shared counters twice. Centralize allocation and save to lobby DB immediately
- **No async/await in Code Blocks:** QuickJS doesn't support `async` in Code Blocks (only World Code)

VI. Update Timeline Highlights

1. 2021–2024 FOUNDATION

- Jan 2021: Bloxd.io launches as a browser-based voxel sandbox
- 2022–2023: Core modes established: Survival, Creative, Bedwars, Skywars, Cube Warfare
- Aug 2024: Update Log system begins. First logged entries: Colored Concrete Slabs, Rocket Spleef, Rush Racing
- Sep–Dec 2024: Cherry Blossom Forests, Guns in Worlds, Friends system, Parties, Lootable Ruins, Paintball, Cow Variations, Sheep, World Customisation

2. 2025 EXPLOSION

109 updates in a single year. The game transformed from a basic sandbox into a platform.

- Jan: Moonstone Axe return, Defusal mode, WorldBuilder, One Block Wide, Fog, Lava
- Feb: Code Boards (Feb 18), Code Blocks (Feb 24), Fat Mushrooms, Smart Mobs
- Mar: Cave Golems, Custom Bedwars/Skywars/CW maps, Natural Disaster (limited time)
- Apr: Draugr Zombies & Skeletons, Mob Spawner Blocks, April Fools left-handed mode
- May: Custom Games publishing, Frozen Badlands, Enchanting & Aura XP, Android app, Wildlife Update
- Jun–Jul: Chalk Blocks, Sleeping, Jungle Update, iOS app, Last Stand 2.0, Fruity Leaves
- Aug: Horses, Firecrackers, Account Linking, Iron Chests, Mob Catchers

- **Sep–Oct:** Natural Disaster major updates, Skin Customization, Capture the Flag, Banners, Underground Ruins, Spirit Mobs
- **Nov–Dec:** Pet Friendship system, 99 Nights (with random map gen, Warper boss, Radar), One Block season, Lucky Blocks Battlegrounds, Fishing

3. 2026 (through June)

CURRENT

- **Jan:** Fishing updates, Minigames vs Bridge Battle, Ranked PvP, 1v1 Fights Update
- **Feb:** 4v4 Ranked Bedwars, Bed Fight, 99 Nights Frozen Forest
- **Mar:** Tsunami Steal Brainrots (brainrot merging, alien invasion), Bloxd SMP, Clutch, Torch & Neon blocks
- **Apr:** Code Editor overhaul by Slushie (syntax highlighting, auto-format, Apr 7), Cosmetic Shop, DimensionZ Frozen Wastes, Sky Islands, Goal Rush, 15+ new guns
- **May:** Heroes vs Brainrots, Core Defenders, Survival with Guns, Emotes, Cosmetic Packs, Day and Night Survival
- **Jun:** Build a Factory, ongoing updates

VII. BloxdHub.com — The Community Platform

1. What It Is v0.55

BloxdHub is "the ultimate social platform for Bloxd.io players" — community-built, not officially affiliated with Bloxd Ltd. It describes itself as "made by Bloxd players, for Bloxd players." Sign in via Google or Discord. Current version is v0.55 (April 18, 2026). 19,216 total registered users; 5,000+ monthly active.

2. Platform Sections

SECTION	DESCRIPTION
Home Feed	Social feed with 4 modes: Recent, Following, Smart, Custom. 20+ post tags (Builds, Memes, Screenshots, Clips, Questions, Tips, Bugs, Artwork, Lore, etc.)
Bloxdboards	Image boards — community pixel art, drawings, memes. Voting and reactions
Forums	Discussion threads for coding help, game strategy, general talk
Mods	Community-made mods downloadable for custom worlds
Schematics	Building blueprints that can be loaded into worlds via WorldBuilder
Speedruns	Diamond Any% speedrun leaderboards
Texture Packs	Custom texture packs for the game
Bloxd API Docs	Community-written API documentation covering ~45–50% of the API

3. Platform Features

- **Collab Posts (v0.55):** Invite one collaborator to co-author a post. They get a notification, can preview, and it only goes live on acceptance
- **Relevant Comments:** Comments sort by relevance by default, with a "recent" toggle
- **Engagement Streaks:** Daily streak tracking for posting, commenting, or reacting
- **Creator Insights:** Analytics dashboard for optimizing posting strategy
- **Custom Themes (Beta):** 11+ visual themes including Bloxd Classic, Underground, Icy Lake, Capture the Flag, Crimson Night, Electric Yellow, Midnight Rose
- **Boosts (Coming Soon):** Special points for advertising mods, highlighting posts, unlocking badges, donating to users
- **Privacy Controls:** Hide specific profile tabs (Reactions, Comments, Mods, Schematics, Boards)

- **Custom reactions:** 20 emoji reactions including custom ones (crypray, bigthonk, thinkly, cutie)
- **Gamemode polls:** Built-in gamemode comparison surveys shared with Bloxd devs

4. YouTuber Program

Requirements: 500+ subscribers, Bloxd-related content. Monthly options: 1 video with 750+ views (20 sec of BloxdHub), or 2 videos with 400+ views each. Dedicated video option: 1 video about BloxdHub with 1,500+ views = 2 months status. Benefits: special name color, badge, ability to post YouTube links. Apply via Discord.

5. API Documentation

BloxdHub hosts the most comprehensive Bloxd API docs available. Community-written (not official). Covers ~45–50% of the API across structured sections: Introduction, Events, Messages, Player Info, Position & Movement, Camera & View, Appearance, Health & Combat, Inventory, Blocks, Block Permissions, Mob Spawning, Mob Settings, and Client Settings (movement, physics, combat, health, UI, world, building). Several sections are marked "Soon" — Particles, Sounds & Music, UI Elements, Damage & Shields, Status Effects, Lobby & Utilities, Crafting, Enchanting. The official GitHub docs are at github.com/Bloxdy/code-api.

6. Community Rules

25 rules (BH-R1 through BH-R25) covering respect, no harassment, age-appropriate content, no spam, correct categorization, credit for others' work, no personal info sharing, constructive feedback, no impersonation, no hateful content. Violations lead to warnings, temporary bans, or permanent suspension.

VIII. The Wider Ecosystem

1. Fandom Wiki

The Bloxd.io Wiki on Fandom is massive: 708 pages, 52,755 edits, 81 active users. It documents every game mode, item, block, biome, mob, and historical update. There are 6 affiliated wikis (Fan Wiki, Worlds Wiki, Custom Games Wiki, Creepypasta Wiki, Dungeons Wiki, Steal a Pet Wiki) plus international versions in Russian and Japanese.^[1]

2. GitHub Presence

The official GitHub org is github.com/Bloxdy. It hosts the `code-api` repository (the API README), and open-sourced custom game code under `developedCustomGames`. A community-maintained block/item list exists at github.com/Quentin-X/filehosting/blob/main/blocks.js, extracted from the game's source code.

3. Competitive Landscape

Bloxd.io is the 4th largest browser game by concurrent users, behind only chess.com (~250K), lichess.org (~95K), and slither.io (~26K). Its nearest .io game competitors by audience overlap are minefun.io (581K visits), splix.io (127K), and iogames.onl (114K). The 28K peak CCU puts it in a different weight class than most browser games.^[2]

4. Discord

BloxdHub runs its own Discord server (discord.gg/SjZJDXNdHH) for community interaction, YouTuber program applications, and dev announcements. The official Bloxd.io game also has a separate Discord with a #dev-log channel where developers announce updates.
